## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-6, and 10-14, drawn to a method of drying a coating film formed by application of a coating solution to a substrate to form an optically functional layer.

Group II, claim(s) 7-9, drawn to an image display system comprising of a polarizing plate and an optical film with an optically functional layer.

### **PCT:Lack of Unity**

#### ***Posteriori***

Lack of unity of invention may be may only become apparent “a posteriori,” that is, after taking the prior art into consideration, in the case of independent claims to A + X and A + Y, unity of invention(i.e. species) is present a posteriori as A is common to both claims.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the special technical feature which is referred to Annex B of Appendix A1 of the MPEP(Administrative Instructions under the PCT, "Unity of Invention"). The express “special technical

features” is defined as meaning those technical features that define a contribution which each of the inventions, considered as a whole, makes over the prior art.” (Rule 13.2).

Unity exists only when there is a technical relationship among the claimed inventions involving one or more of the same or corresponding claimed special technical features.

In this case, the technical feature shared by each invention is the optically functional layer.

The question of unity of invention has been reconsidered retroactively by the examiner in view of the search performed; a review of Bogart (US 5550036) makes clear that the inventions of the groups I and II lack the same or corresponding special technical feature because the cited reference(s) appear to demonstrate that the claimed technical feature does not define a contribution which each of the inventions, considered as a whole, makes over the prior art. This is because Bogart teaches the method of forming an optically functional layer, but they teach it being prepared by a materially different method than that of Group I. Accordingly, the prior art of the record supports restriction of the claimed subject matter in to the groups as mentioned immediately above.

### ***Conclusion***

No claim is allowed.

All pending claims are subject to restriction/election requirement.
